**Appendix 2: Guidance for submitting photographs**

If you have digital or scanned photographs, please INSERT THEM BELOW WITHIN THIS DOCUMENT using the Word menu:

“Insert > Picture “ (or similar)

Crop and resize the images as you feel necessary but please **do not** edit them in any other way (e.g. altering colour, hue, saturation, contrast etc.). It is rarely necessary to have an image larger than 600x400 pixels in a document (and you can always state, “Original images are available on request”). Limit your images to the most useful 4 or 5 shots of an individual bird. If you have a large number of images that you think might be useful, you can always state “More images are available on request”.

In general, easily identified species, such as Black Stork, White-throated Kingfisher, Spur-winged Lapwing, usually need just one good image to support the identification. Difficult species will often require a series of images taken from different angles or under different lighting conditions.

We welcome submission of images taken by other photographers (with prior consent and named acknowledgement).

If any of the images have already appeared on a website such as [www.uaebirding.com/forum](http://www.uaebirding.com/forum) and you wish to use these instead of inserting jpeg/png files, please make a screenshot of the appropriate webpage (including the URL) and paste it immediately below the image.

You can extend this document to more pages to accommodate your information and inserted photographs.
